

The Only Known AMP Seed Treatment in the World

It takes a lot of energy for a seed to germinate properly. Conklin's Amplify[®] seed germination aid increases that energy to provide a jump start for each seed. Its patented formula, developed by the University of Arizona, enhances the supply of AMP (adenosine monophosphate) which is utilized by seeds to fuel growth. AMP helps seeds overcome stress conditions like cold, wet soils and low seed lot vigor.

Amplify-D is fortified with micronutrients to help the seedling in its very early stages and ensure that the young plant receives all the nutrients it needs to reach its highest potential. We've added talc to reduce planter wear, aid in smooth seed flow through all types of planters and drills, and help provide protection against planter plugging caused by high humidity.

Amplify-L A liquid applied version to benefit seedlings during early growth and achieve more uniform plant stand. Can be dissolved in water for application by itself or blended with pesticides for simultaneous application.

Benefits of Amplify:

- Helps seeds overcome stressful, cold and wet conditions
- Encourages faster and more uniform emergence
- Fuels early growth and vigor for enhanced plant health

"Amplify is one of my favorite AgroVantage products. We've seen anywhere from four to 12 bushel increases by using Amplify. It costs less than one bushel per acre to use."

– Jerry Cox, Missouri
NCGA National Corn Yield Champion

Amplify Helps Set the Stage for Higher Yields

Amplify has shown positive results on corn, milo, cotton, small grains, small seeded grasses and alfalfa. Faster seedling emergence equals a more uniform stand.

Performance Characteristics

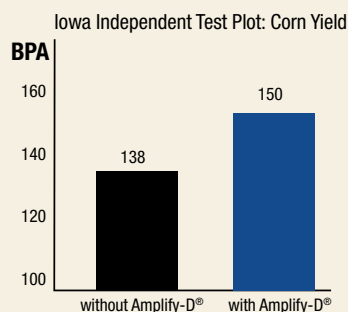

- Enhances seedling vigor and stand establishment
- Potential to increase yields
- Will not interfere with pesticide performance
- Stabilizes seed microclimate
- Fuels fast seedling growth

Product Characteristics

- Effective on cotton, corn, alfalfa, small seeded grasses and small grains
- Provides additional adenosine monophosphate (AMP)
- Amplify-D provides supplemental micronutrients
- Compatible with most seed treatments
- Blue (Amplify-D) or green (Amplify-L) color makes treated seeds easily identifiable

Bigger Yields Mean Bigger Profits

In this independent Iowa study on no-till corn, Amplify-D – treated seed increased corn yield by 12 bushels per acre.

AgroVantage is part of the family of Conklin products designed to save fuel, energy, time and money so you can work smarter, live better. Opportunities are available to start your own Conklin business.
