

Harvest Extra Savings This Fall and Winter!

Whether you're sitting tall in your combine or driving a tractor, you're burning up hundreds of dollars in fuel. If – like most producers – you'd rather keep those dollars in your pocket, let us show you how to reduce your fuel usage.

- Just add Conklin's Diesel Plus® to your bulk tank. This diesel fuel conditioner improves engine efficiency and gives you better mileage while its soy lubricants extend the life of your injectors and fuel pumps*.
- Diesel Plus also lowers your fuel's gel point by up to 35 degrees. So you can depend on your engine running, even in cold weather.
- Clean your fuel system with 4-Power® D periodically. Conklin's proven fuel system cleaner will help your engines run smoother and improve their performance. Works together with Diesel Plus to enhance mileage.

Mike Pikarski, crop producer and Conklin National Director explains –

"I add Diesel Plus to my 10,000 gallon bulk tank because it keeps the fuel from gelling and lubricates the fuel system. I don't ever have to worry about my farm equipment not running because of the cold weather. It also provides substantial savings on maintenance and fuel costs."

Fast Fact

Fuel prices paid by farmers rose by nearly 850 percent between 1970 and 2005.
