

Innovative and economical crop management program

Protect Your Yields Against Soybean Cyst Nematodes

Purdue University research indicates Soil X-CYTO® usage
reduces female soybean cyst nematodes (SCN) 62%*

Soil X-CYTO®

Plant Growth Regulator/Nematode Suppressant

Benefits :

- Research indicates 3 - 6 more bushels per acre
- Greater root development
- Labeled for over 40 crops
- Lower female SCN
- Greater environmental stress resistance
- Non-hazardous formula

Soil X-CYTO® is a liquid formulation produced by microbial fermentation and is easily applied in combination with Feast® starter fertilizer at planting.
