

Kombind[®] Compatability Agent/Acidifier/Buffer

Improves blending, acidifies and, buffers spray solutions

Take the hassle out of combining liquid fertilizers and pesticides, and cut down on your time in the field with Kombind[®] compatibility agent. Kombind improves the blending and stability of fertilizer/pesticide mixtures and provides an effective way to lower and buffer the pH of water spray solutions. With an aggressive blend of surfactants, acidifiers, buffers and compatibility ingredients, Kombind helps stabilize ag chemical combinations.

- Saves time by preventing plugged lines
- Saves money by keeping spray solution at most effective pH level
- Apply both fertilizer and pesticide in a single pass
- Easy to use

"With Kombind, my pesticides mix easier so the chemicals don't plug up my equipment lines. Because of the product's acidifying and buffering capabilities, I use less pesticide to get the same results per acre."

– Erling Albin, Hanley Falls, Minn.

Kombind

An effective acidifying and buffering agent

High pH conditions with water carriers provide the potential for some pesticides to deteriorate and lose their effectiveness through alkaline hydrolysis. Kombind helps your pesticide spray retain its maximum effectiveness by lowering the pH and buffering the solution to keep the pH stable. Kombind also enhances the penetration and absorption of some pesticides and foliar-applied nutrients.

- Highly concentrated formula
- Ideal for custom applicators
- To improve compatibility, mix 1.2 to 11.2 pints/100 gallons of fertilizer or fertilizer/pesticide solution, depending on label instructions
- For pH adjustment, mix 1 to 24 ounces/100 gallons of water or water/pesticide solution, depending on label instructions
