AMPLIFY[®]-L

Seed-Applied Fertilizer

DESCRIPTION

Amplify-L is a liquid dispersible seed emergence aid that provides an extra source of energy (adenosine monophosphate) needed to help overcome stresses such as cold, wet conditions encountered during planting.

PERFORMANCE CHARACTERISTICS

- Enhances seedling vigor and stand establishment
- Potential to increase yields
- Will not interfere with pesticide performance
- Stabilizes seed microclimate

PRODUCT CHARACTERISTICS

- Effective on cotton, corn, alfalfa, small seeded grasses and small grains
- Provides additional adenosine monophosphate (AMP)
- Compatible with most seed treatments
- Green color makes treated seeds easily identifiable
- Contains flow agent to reduce caking in high humidity

DIRECTIONS FOR USE

Amplify-L can be dissolved in water for application by itself or blended with pesticides for simultaneous application. Seed treated with Amplify-L may be stored for later use except where Amplify-L is applied to previously pesticide treated seed. In the case of applying Amplify-L to seed previously treated with pesticide, contact Conklin's AgroVantage department for guidelines. Cotton seed treated with di-syston should not be treated with Amplify-L. Dissolve Amplify-L in dilution water prior to the addition of wettable powders or oil-based flowable pesticide formulations. Dissolve Amplify-L in water at the following rates: one pound Amplify-L in 5 to 10 quarts water – applied to 700 to 1,500 pounds seed.

SPECIFICATIONS

Part number

39651	1-pound container
39669	4-1 pound containers per case

Guaranteed analysis:

Total Nitrogen (N)	7%
Available Phosphoric Acid (P ₂ O ₅)	38%
Nutrients from:	Disodium Phosphate, Adenosine Monophosphate (AMP), and Monosodium Phosphate

Appearance

Gray powder

pH, 10% dilution with DI water

6.3

Storage

Store in cool, dry location
