

CONKLIN® AgroVantage[®]
SYSTEM

LAWN CARE

Are you looking to start a full or part-time lawn care business, expand your existing business to include lawncare, or looking to switch to an all-liquid program?

Conklin's AgroVantage[®] lawn care products and programs have developed and advanced over the course of 40 years to provide exceptional results, which homeowners and building managers can be proud of. The AgroVantage lawn care products and program offer these benefits to your business:

- All liquid products that are professional, easy to apply, and environmentally friendly
- Company-sponsored training program where you learn about products, applications, and how to manage your business
- Managing your business to your goals; develop your business to your aspirations
- Corporate support

PRODUCTS

AgroVantage Lawn Care Products

• Feast® Lawn and Turf fertilizers

- Nitrogen—Feast Premium Plus Liquid Turf fertilizer 28-0-0 is a combination of urea, triazone, and dicyandiamide (DCD) for a longer-lasting, more uniformly green lawn for up to 8-10 weeks
- Potassium and sulfur—Feast Side-Kick 0-0-25w17S is Conklin's potassium thiosulfate, chlorine-free, readily available potassium and sulfur to further promote a healthy, thriving lawn

• Secondary and micro-nutrients

- Feast Profit Master Secondary and Micronutrients are 100% chelated or complexed for maximum availability and effectiveness.
- Feast Chelated Iron helps to maintain a darker green color while the other Feast Chelated Micronutrients help address other health and disease issues that may be caused by nutrient unavailability, due to pH or compaction issues.

• Adjuvants that improve your spray uniformity and effectiveness

- Wex® is a multipurpose adjuvant that reduces water surface tension for improved leaf coverage, defoamer, compatibility agent that is also a soil amendment
- Rain Fast® reduces surface tension for greater leaf coverage and improves spray uniformity
- Bulls Eye® is a drift retardant and deposition aid that reduces and eliminates the fines to keep your spray solutions on target
- Kombind® is a defoamer as well as an acidifier/buffering agent. The majority of today's pesticides and herbicides should be applied using slightly acidic water to maintain maximum effectiveness. Kombind not only lowers the water pH, it buffers the pH to maintain that lower pH, whereas other products may initially lower the pH, but then creep back to the original pH.

• Biologicals to encourage plant growth and soil health

BENEFITS

Benefits of the Conklin AgroVantage System Lawn Care Products:

- Unique formulations that contain readily-available and slow-release nitrogen sources, readily available potassium, and sulfur sources.
- Little to no impurities; virgin raw materials mean the fertilizer is not a by-product from some manufacturing process.
- Low Biuret nitrogen; fewer impurities mean lower burn potential, environmentally safer fertilizer, and better health for lawns and soil.
- Secondary and micro-nutrients; chelated and complexed micronutrients that won't become tied up in the soil to become unavailable to the grass.
- Nutrients are taken up through both the grass blades and through the root system.
- Complete line of adjuvants to reduce drift, enhance absorption, reduce or eliminate foaming, and enhance compatibility for improved spray solutions and performance.
- Biological products enhance both root and blade growth for a thick, lush lawn, while it also feeds the soil microbes for improved soil health.
- Compatible with your existing pumps and tanks so no new special equipment is needed.

The Conklin AgroVantage Lawn Care System has allowed me to build a large lawncare business with over 450 customers at one time, quit my factory job and help others start a lawncare business. I know I could not have built this kind of business without the support, training and quality of the products offered through the lawn and turf system.

- Brian B., PA

Benefits of the Conklin AgroVantage System Lawn Care Products for the Applicator:

- Professionally formulated liquid fertilizer for lawns and sports fields.
- Near neutral pH that won't rust or damage your equipment or pumps.
- Compatible with most herbicides and pesticides
- Uniform spray solutions.
- One-trip applications; more lawns per day equates to more profits, using ride-on equipment or hand spraying.
- Customizable formulations to meet the nutrient needs of your area.
